

1. Overview

The code in this replication package constructs an extension analysis of the Mindspark Experiment (Muralidharan et al, 2018) using Stata. One file in the “code” folder generates the gender heterogeneity extension results in the paper. Results will be stored in the “results” folder. The replicator should expect the code to run for about 2 seconds.

2. Data Availability

The replication file uses the data source from Muralidharan et al. (2018), which can be accessed through <https://www.aeaweb.org/articles?id=10.1257/aer.20171112>.

3. Dataset list

Data file	Source	Provided
data/ms_blel_forirt.dta	Muralidharan et al. (2018)	Yes
data/ms_blel_jpal_long.dta	Muralidharan et al. (2018)	Yes

4. Software Requirements

Stata (code was last run with version 16)

5. Instructions to Replicators

Run code/extension.do to run the regression and store the results.
